<sup>2</sup> Michigan State University, College of Veterinary Medicine, Department of Small Animal Clinical Sciences, East Lansing, MI, USA

<sup>3</sup> Michigan State University, Center for Statistical Training and Consulting, East Lansing, MI, USA

<sup>4</sup> Clinical Neuroscience, Karolinska Institute, Stockholm, Sweden

# Glaucoma

- Effects many, yet no cure for any
- Leading cause for irreversible blindness worldwide
  - Dogs & humans
    - Estimated prevalence: 1-2%
- Glaucoma = retinal degeneration
  - Retinal ganglion cells (coma or cell death)
  - Optic nerve head (atrophy)
- Risk Factors
  - Increased intraocular pressure
  - Genetics

A

B

# Nicotinamide

- Dietary Nicotinamide (NAM) supplementation → NAD (Nicotinamide Adenine Dinucleotide)
  - Redox metabolism
- Increased Serum NAD<sup>+</sup> → presumed neuroprotectant for retinal ganglion cells

## Previous Studies

- DBA/2J mouse model
- Human

Nicotinamide = Niacinamide = C<sub>6</sub>H<sub>6</sub>N<sub>2</sub>O

# Purpose

This masked, randomized study aimed to demonstrate the effect of 7-week NAM supplementation on inner retinal function using electroretinography (ERG) in *ADAMTS10*-OAG dogs.

# Materials & Methods

- IACUC
- 10 adult dogs
- Purpose-bred
- *ADAMTS10* – Primary Open Angle mutant dogs
  - Age, weight, sex

# Materials & Methods

## Open-Angle Confirmation

- Gonioscopy
- RetCam II

# Materials & Methods

## Normal Diet Maintained

- Teklad 2027
- Purina Pro Plan, Classic Adult
  - Chicken & Rice Entrée

# Materials & Methods

## NAM Supplementation

- 1500 mg NAM per day
  - 500 mg NAM (1 capsule) in a meatball
    - 3 times a day
      - 7:00 am, 3:00 pm, 11:00 pm

## Sham Supplementation

- 1 'empty' meatball
  - 3 times a day
    - 7:00 am, 3:00 pm, and 11:00 pm

# Materials & Methods

## Retina Function

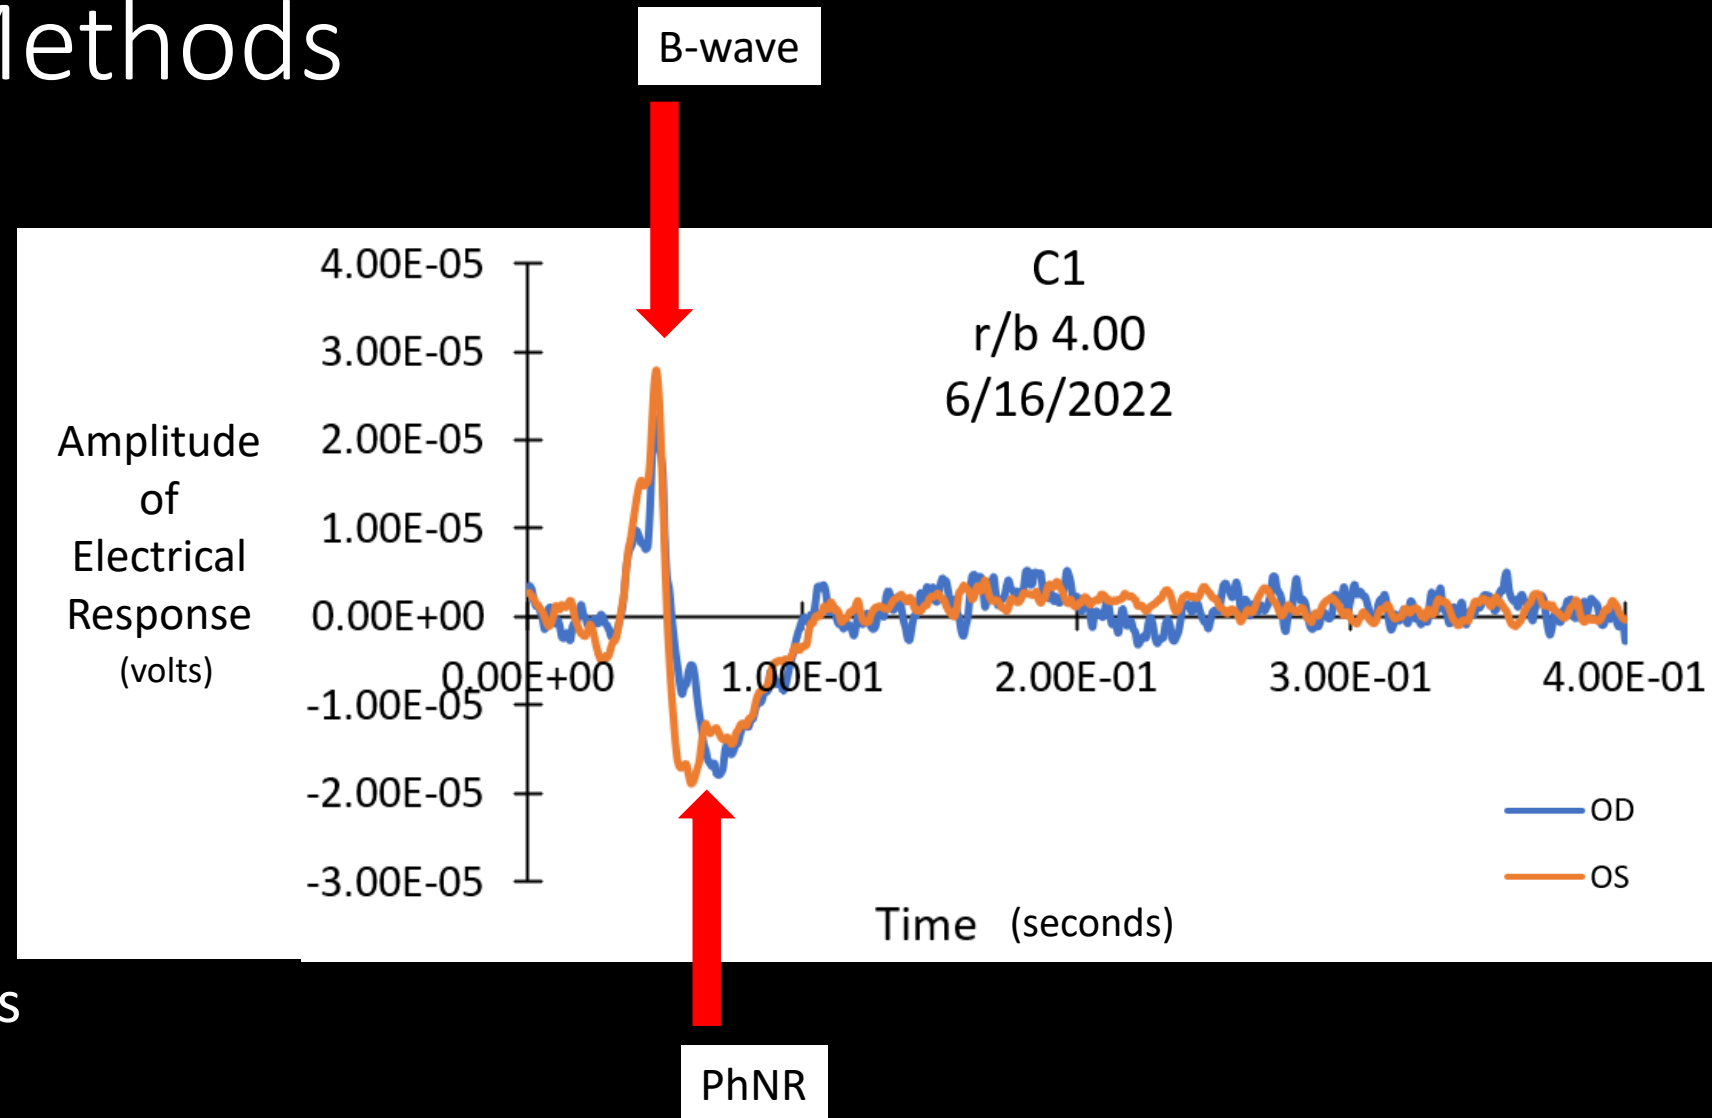

- Electroretinography (ERG)
  - Electrodes: Positive (RM), Negative, and Ground
  - 'Red on Blue' flash
    - Blue light adapted (5 minutes)
    - Red flash
      - 0.07, 0.90, 1.74, 2.57, 3.40, 4.00 cd.s/m<sup>2</sup>
- ERG Variability
  - Pupil size
    - increased pupil = increased response
  - Intraocular pressure
    - Increased IOP = decreased response

# Materials & Methods

## Retina Function

- ERG (Right & Left)
  - Time (seconds)
  - Amplitude (volts)
- B-wave:
  - cone bipolar cells
- PhNR:
  - retinal ganglion cells

# Materials & Methods

## Ophthalmic Monitoring

- Ophthalmic Exams
  - Indirect fundoscopy
  - Slit lamp biomicroscopy
- Intraocular Pressure
  - Rebound tonometry
- Retinal Photography

# Systemic Monitoring

- Physical Exams
  - General health
  - Weight

# Summary

- Baseline comparisons between groups shows the groups were similar
- Minimal differences between groups with respect to *time* (cone bipolar cells and retinal ganglion cells) and short-term supplementation
- Some statistical difference, but no clinical significance was found between groups with respect to *amplitude* (cone bipolar cells and retinal ganglion cells) and short-term supplementation

**Short-term NAM supplementation at selected standard doses did not result in a noticeable improvement of inner retinal function in the well-established, clinically relevant large animal OAG model.**

# Limitations

- Small sample size
  - Each group with 5 dogs
- Short timeline
  - 5 weeks of supplementation
- ERG
  - Low flash intensities
  - Low electrical responses
  - Noise

# Conclusion

- First study to evaluate effects of nicotinamide supplementation in canine POAG
- No detectable significant treatment effect of NAM for any of the tested ERG parameters were noted for short-term supplementation
- Nicotinamide could still be neuroprotective to prevent optic nerve degeneration when used for long-term treatment.

# EXTRA SLIDES

# Dose & Dosage Calculations

## Nicotinamide Dog Weight

**Nicotinamide Group:**

Dose: 1,500 mg Nicotinamide/day

## Control Dog Weight

**Control Group:**

Dose: no supplementation

# Dosage

N5 lost weight  
and increased  
dosage

# 'Open-Angle' Glaucoma

# Materials & Methods

## Nicotinamide Supplementation

- Treatments sheets
- Instructions
- Accountability

# Regular Diet Information

# Materials & Methods

## Meatballs

- Purina Pro Plan, Veterinary Rx Diet, HA Hydrolyzed (chicken flavor)

# Materials & Methods

## Nicotinamide Supplementation

- 1 capsule = 500 mg Nicotinamide
- Purina Pro Plan, Veterinary Rx Diet, HA Hydrolyzed (chicken flavor)

# Materials & Methods

## Retinal Photography

# Materials & Methods

## Retina Function

- Electroretinography (ERG)
  - Red on Blue
    - Blue light adapted (5 minutes)
    - Red flash
      - 0.07
      - 0.90
      - 1.74
      - 2.57
      - 3.40
      - 4.00

# Anesthesia

- 0.5 mg/kg Ondansetron tablets
- Pre-meds
  - 0.02 mg/kg Acepromazine and 0.2 mg/kg Butrophanol given intravenously
- Induction
  - 30-50 mg of Midazolam was given intravenously based on age
  - and 4-7 mg/kg propofol was given to effect.
  - Crystalloid maintenance fluids given 10-12 mg/kg/hr while under anesthesia.
- Maintenance
  - with 1-2% isoflurane
  - 1-1.5 L/kg/min oxygen flow rate with house oxygen and passive scavenging with activated charcoal canisters.

# Dorzolamide / Timolol

- Cosopt (dorzolamide / timolol)
  - **Dorzolamide** → carbonic anhydrase inhibitor
    - Decreases aqueous humor production 30-60%
  - **Timolol** → beta blocker
    - Beta 1 and beta 2 blockade in ciliary process
  - Effect: lower eye pressure by lowering the amount of fluid in the eye
- Eye Dropper
  - 10ml of 2%/0.5%

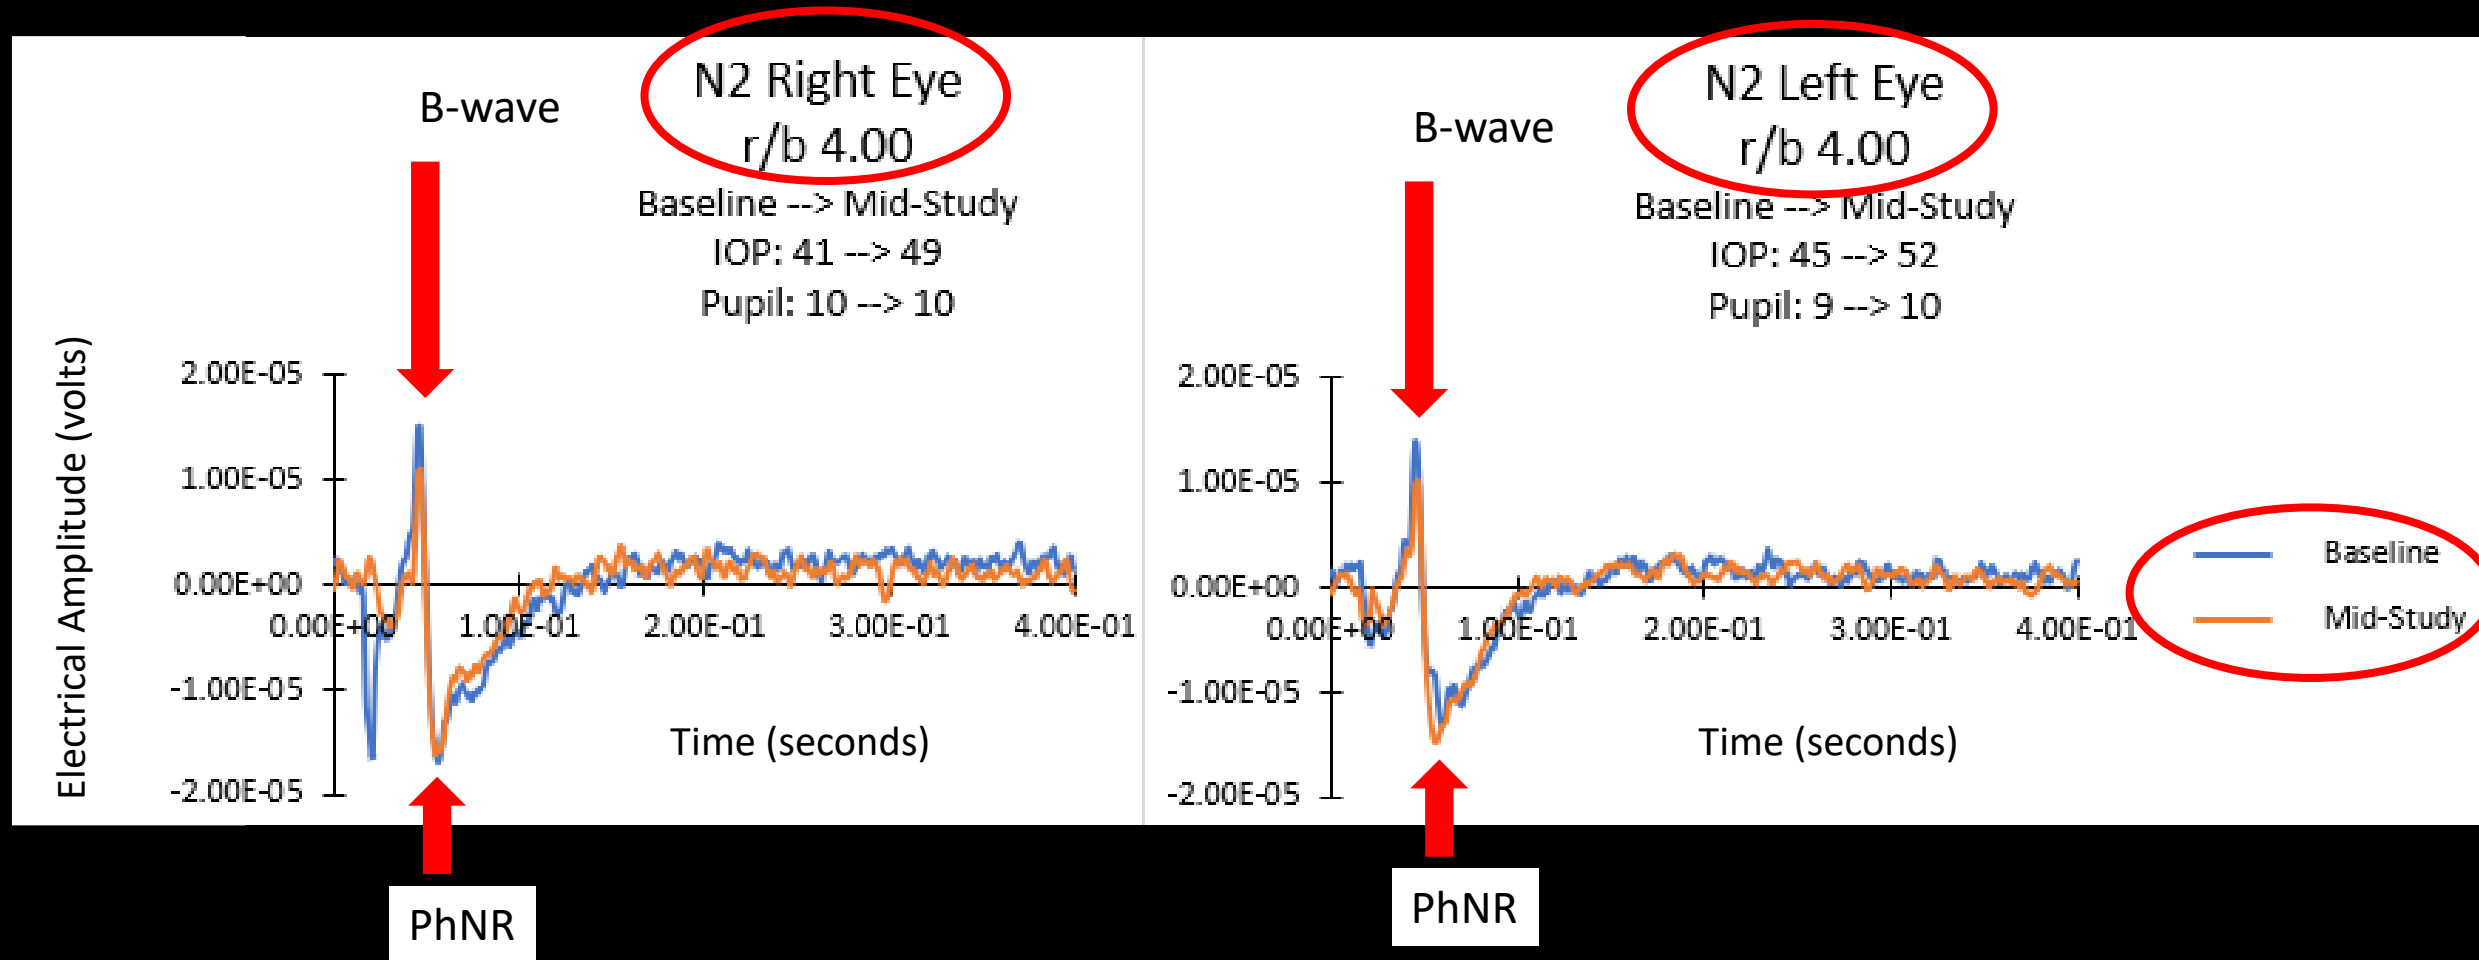

ERG	7 – weeks NAM Group Mean $\pm$ SD	7 – weeks Control Group Mean $\pm$ SD

 $y = 5\text{th week} - \text{Baseline}$

# Plumb's

- Dose recommendations
- Monitoring recommendations
  - Liver enzymes; especially with,
    - Doxycycline
    - minocycline

## Dosages

### ■ DOGS:

Adjunctive treatment of sterile inflammatory diseases (extra-label): Niacinamide may be used alone; however, more therapeutic benefit is seen in combination with a tetracycline. Recommended dosages are empirical and vary somewhat. Practically, for dogs weighing 5 kg or less: niacinamide 125 mg per dog PO 3 times a day; for dogs weighing 5-10 kg: niacinamide 250 mg per dog PO 3 times a day; for dogs weighing more than 10 kg: niacinamide 500 mg per dog PO 3 times a day. If efficacious, may reduce niacinamide dose to twice daily administration and then tapered further over time when possible.

NOTE: When using doxycycline, recommended dose is 5 to 10 mg/kg PO twice daily. If substituting with minocycline, use 7.5 mg/kg PO twice daily.

## Monitoring

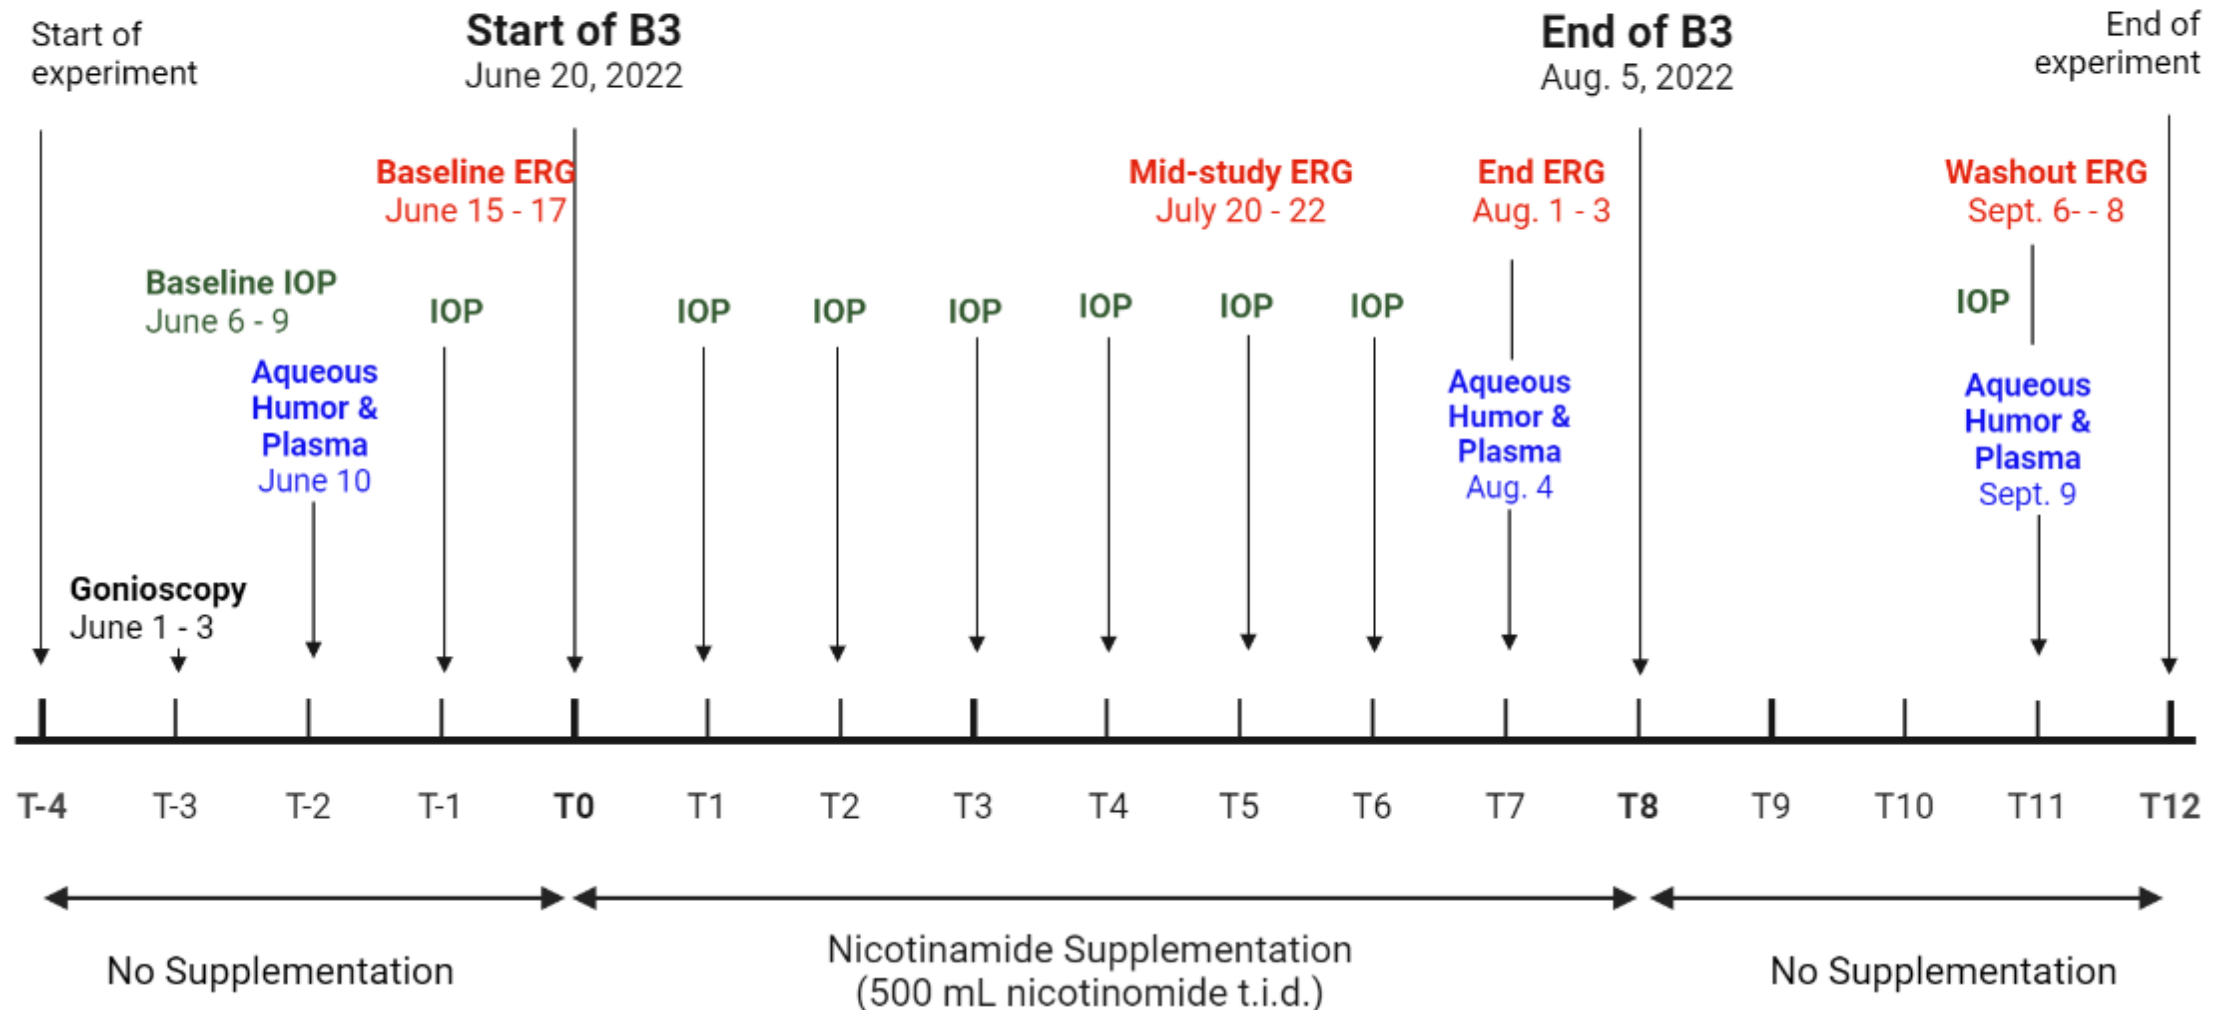

- Efficacy.
- Adverse effects (baseline and occasional monitoring of liver enzymes is suggested), particularly when combined with other drugs that may increase liver enzymes such as doxycycline or minocycline.

## Client Information

- Used in dogs in combination with a tetracycline for treatment of a variety of serious skin and other autoimmune diseases.
